algorithm ChainedHashInsert($T_{x}x$)

Füge x an den Kopf der Liste T[h(key[x])] ein. **end algorithm**

algorithm ChainedHashSearch(T, k)

Suche in der Liset T[h(k)] nach einem Element mit dem Schlüssel k. end algorithm

algorithm ChainedHashDelete($T_i x$)

Entferne x aus der Liste T[h(key[x])].

end algorithm

```
algorithm HashInsert(T, k)
   i = 0
   repeat
      j = h(k, i)
      if T[j] = NIL then
          T[j] = k
          return j
       else
          i = i + 1
       end if
   until i = m
   Error "Überlauf"
end algorithm
```

```
algorithm HashSearch(T, k)
   i = 0
   repeat
      j = h(k, i)
      if T[j] = k then
          return j
       end if
      i = i + 1
   until i = m or T[j] = NIL
end algorithm
```
