★ Exercise 2 Micro Computer - Greatest Common Divisor

The following C program implements the Euclidean algorithm for calculating the greatest common divisor (GCD) of two positive integers x and y.

```
\begin{array}{ll} \text{int GCD(int } x, \text{ int } y) \ \{ \\ & \text{int } r; \\ & \text{do } \{ \\ & r = x \ \% \ y; \\ & x = y; \\ & y = r; \\ \} \ while \ (y := 0); \\ & \text{return } x; \\ \} \end{array}
```

b) Utilize the assembler program with the modulo calculation to translate the C implementation of the GCD into a corresponding assembly program in the language of our simple simple model computer from the lecture. Verify the correctness of your program by running it with (at least two) suitable pairs of values and document it in your report. Important: Add helpful comments to your code to enhance its readability.

| In | iportant: Ac | ia neipi Line | ui comments Label | comand |
|-----|--------------|------------------|----------------------|---|
| 26) | Code: | 0 | | LDA (13) lode × auo Speicher |
| · | | 1 | | SUB (14) / zieha y als 9-6=3 |
| | | 2 | while: | BRN switch: Il Wenn negativ, dann id [14] größer -> tauchen |
| | | 3 | | LDA (13) / Tabáchlicher Beginn: lade Große Zahl in Acc |
| | | 4 | | STA (15) Speichere in [15] |
| | | 5 | sub: | SUB (14) Il Subtrahière kleinere von Acc in Acc |
| | | 6 | | BRN exit: // 1st negativ? spring |
| | | a | | STA (15) // sonol speichere Rest in (15) |
| | | 8 | | Inp sub: 1/ ziehe so off als bis Zahl neg. ist |
| | | و | exit: | LDA (14) lade y |
| | | 10 | | STA (13) Speichest y in x |
| | | 11 | | LDA (15) lade r |
| | | 12 | | STA (114) Il speichere T in y |
| | | 13 | | BRZ end: Il wenn y == 0, dann endel Schleife |
| | | 14 | | JMP white: I amoonsten wiedesh. Schleife |
| | | 15 | swilch | LDA (13) Il lade Relinere Zahl in Acc |
| | | 16 | | STA (15) Speichere was in Acc ist in [15] |
| | | 17 | | LDA (14) lade in ACC [14] |
| | | 18 | | STA (13) Speichere was in Acc ist in [13] |
| | | 19 | | LDA (15) Il lade kleineren Wet aus [15] |
| | | 20 | | STA (14) // speichose ihn in [14] |
| | | 21 | | JMP stort: Il starte neu, da nun größeres vorne |
| | | 22 | end: | LDA (13) Il lade × in Acc |

Bsp

^{9- 4 = 5 =} acc wert -> nicht negativ also wiederhole

^{5 -4 = 1 ==} acc wert -> nicht negativ also wiederhole

^{1 - 4 = -3 ==} acc wert -> negativ also brich ab du hast als rausgefunden das 1 das ergebnis von 9%4 ist
